Abdu-Lateef Lekan-Fadeyi

alekanfa@uoguelph.ca| (587)-228-1366 | linkedin.com/in/abdu-lateef-lf | github.com/Abdu-LateefLF

TECHNICAL SKILLS

Languages – Python, TypeScript, JavaScript, C, C#, Java, SQL, C++, HTML/CSS
Frameworks/Libraries – FastAPI, .NET, React.js, LangGraph, LangChain, Next.js, scikit-learn, PyTorch, Jest, pytest
Tools and Databases – Node.js, Docker, Git, GitHub, Nginx, Microsoft Azure, AWS, GCP, Redis, PostgreSQL, MySQL, SQLite
Practices – Object-Orient Design, REST, SOLID, Agile/Scrum, Distributed Computing, CI/CD

EXPERIENCE

Classwise AI (www.classwise.ai) **May 2025 – Present**
Co-Founder & Chief AI Officer *(TypeScript, PostgreSQL, Node.js, Next.js, LangGraph, GCP, Jest)*

- Architected an AI agent **(TypeScript, LangGraph)** for grading handwritten assignments grounded in teacher rubrics and materials, **saving customers 1,800+ hours**.
- Built a **full-stack** application **(Node.js, Next.js, PostgreSQL)** enabling teachers to manage courses, assignments, and rosters, and generate, review, and distribute student feedback, **generating $55K in revenue**.
- Implemented a **pluggable integration** system for learning management systems **(Google Pub/Sub, Cloud Functions)** supporting Google Classroom, Canvas, and Moodle, simplifying data transfer and **reducing manual setup effort** by **90%**.
- Designed an evaluation system and gathered datasets for measuring grading accuracy, model failure modes, latency, and costs, **catching performance regressions** before reaching production, **reducing incidents by 82%**.
- Deployed **distributed PDF/image processing and grading workers** for processing jobs from a queue with retries, ownership, and **concurrency handling**, building a fast and reliable pipeline **grading 14,000+ assignments**.

AskCipher **May 2026 – Aug. 2026**
AI Software Developer Intern *(Python, TypeScript, FastAPI, React.js, LangGraph, Docker, GCP, Pytest)*

- Built a stateful Browser **LLM Agent (Python, LangGraph)** as a **microservice**, for automating actions in the user's browser to expand the platform's capabilities beyond supported APIs, projected to influence **over $120K in revenue**.
- Built a chrome extension **(TypeScript, React.js, Chrome API)** maintaining a websocket with heartbeat and reconnection logic to the backend, enabling the execution of remote actions on the user's device.
- Solved a routing problem affecting agent communication through **websocket** connections **across microservice replicas** by utilizing a **pub/sub (Postgres LISTEN/NOTIFY)**, without introducing new infrastructure.
- Designed a **chat memory retrieval system** using query expansion, BM25 and cross-encoder reranking, achieving high accuracy with low-cost infrastructure.

Magnet Forensics **Sep. 2025 – Dec. 2025**
Software Developer Intern *(C#, .NET, Linux Scripting, xUnit, Moq)*

- Expanded a core processing library **(C#, .NET, SQLite)** to **support 7 new applications**, expanding the capabilities of **10+ products** consuming the API.
- Reverse-engineered an app's encryption to identify its key derivation and data mappings, and built a tool to access the data, fulfilling a highly requested customer feature.
- Designed and implemented unit and regression tests **(xUnit, Moq)** in CI pipelines, preventing bugs in critical features.

D2AI.ca **May 2025 – Aug. 2025**
ML/AI Software Engineer Intern *(Python, TypeScript, FastAPI, MySQL, Next.js, PyTorch, pm2)*

- Implemented a full-stack admin approval flow for e-transfer payments **(Python, TypeScript, FastAPI, Next.js, MySQL)**.
- Developed a CNN pipeline **(PyTorch, MediaPipe, OpenCV)** to analyze basketball shots and provide feedback.

PERSONAL PROJECTS

Gate Scale (FinQL) | View **Apr. 2026**

- Built a DSL interpreter and interpreter API with a **sandboxed evaluator (TypeScript, Node.js, PostgreSQL, Docker Compose)** allowing secure access via API keys, rate limiting with **Redis**, and load balancing **(Nginx)** handling traffic.

Political Figure Classifier | View **Mar. 2025**

- Built a **full-stack** app **(Python, TypeScript, Flask, Vue.js)** with image preprocessing **(OpenCV)** for feature extraction**.**
- Tuned models (**SVM, Random Forest, Logistic Regression)** with **Grid Search**, achieving **92.31% classification accuracy**.

EDUCATION

Bachelor of Computing, Software Engineering (Co-op), Minor in Business **2023 – 2028**
University of Guelph, Guelph, ON

- Currently maintaining a **4.0 GPA (95% average)**, with top marks in Data Structures, OOP, and Operating Systems.
- Related Coursework: System Development & Integration, Analysis & Design of Algorithms, and Parallel Programming.

ACHIEVEMENTS

1st Place Winner, DMZ Pascal Siakam EdTech Engine Demo Day **Aug. 2026**

- Won **$30,000** for Classwise in a pitch competition as part of the **#1 university incubator globally** (**7 startups** chosen).

Participant in NEXT AI Canada 2026 Cohort **Mar. 2026 – Aug. 2026**

- Accepted into one of the most competitive accelerators in Canada, providing business and technical mentorship.

1st Place Winner, BFN Black Career Conference Pitch Competition **Jan. 2026**

- Awarded a **$5,000 grant** for Classwise AI, placed **1st out of 100+ founders** across Canada at the University of Toronto.
